

Battery enterprise investment attraction plan

How can private-equity firms play a role in the battery industry?

As a new industry ecosystem is built, here are three key ways for private-equity firms to play a role. Europe and the US need more suppliers at all stages in the battery value chain, and established equipment makers are well connected within the continent's industrial production system.

How much money will the battery industry receive?

The industry will receive a combined \$2.8 billion to build and expand commercial-scale facilities to cater to the local auto sector. The battery industry is also complex and fragmented, with multiple players involved at each step of the value chain.

What is a reasonable target for European battery production?

We think reasonable targets are a scrap rate of 3% (much lower than many plants achieve at the moment) and output of over 20 GWh a year for a single production line, at least in mass-market applications. Moreover, several European battery manufacturers already exist - some of them outside the high-volume automotive business.

Why is France launching a battery industrial offer?

European demand for batteries is growing fast and is set to increase 14-fold by 2030, mainly driven by the electrification of transport. Given the strategic nature of the battery industry and its economic significance, the emergence of a French industrial offer has been France's top priority.

Who is involved in the battery industry?

The battery industry is also complex and fragmented, with multiple players involved at each step of the value chain. These include miners and processors of raw materials, component producers and battery manufacturers, and end users and recyclers.

How will the EV industry be impacted by a bipartisan infrastructure law?

In parallel to European efforts, the USA are pushing large scale industrialization via the Bipartisan Infrastructure Law to expand domestic manufacturing of batteries for electric vehicles (EVs). The industry will receive a combined \$2.8 billion to build and expand commercial-scale facilities to cater to the local auto sector.

Creating a business plan for battery manufacturing is crucial for any entrepreneur looking to enter the rapidly evolving lithium-ion battery industry. The global demand for lithium-ion batteries is projected to reach \$100 billion by 2025, driven by the growth of electric vehicles (EVs) and renewable energy storage solutions.
