

How do I Activate my Car Battery?

All conventional batteries leave the facility dry. Electrolyte/Battery Acid must be purchased along with the battery to activate it. The battery must be out of the vehicle and placed on a level surface. Remove the filling caps (red, yellow, or green colored battery caps). Remove the red sealing cap from the vent elbow.

How do I activate an AGM battery?

To activate an AGM Battery, the battery must be out of the vehicle and sitting on a level surface. Remove the electrolyte container from its plastic storage bag. Remove the strip of caps and set it aside as it will be necessary later in this process.

How do I activate a Yuasa Battery?

The following eight steps explain the process of activating Yuasa's Conventional, YuMicron and YuMicron CX batteries: The battery must be out of the vehicle and placed on a level surface. Remove filling caps (red, yellow or green colored battery caps). REMOVE THE RED SEALING CAP FROM THE VENT ELBOW.

How do I Activate my dry AGM battery?

When activating your dry AGM battery, use only the dedicated acid container that comes with the battery to fill the battery cells. This original container has the proper amount of electrolyte for your battery. This is important for service life and battery performance.

How do you fill a battery with electrolyte?

Place the electrolyte container with the foil seals face-down into the cell filler ports on the battery. Hold the container level and push down to break the foil seals. This will allow the electrolyte to flow into the battery. Air bubbles will be seen inside the container as it empties. Do not tilt the electrolyte container.

Do I need to register a new battery?

Depending on the make of car and the functionality of the respective system (open or closed), modern vehicles with Battery Energy Management (BEM) may or may not require or recommend that the new battery be registered.
